## 72 QUESTION

Let  $\Omega = (0, 1]$  be the sample space and let P(.) be a probability function defined by

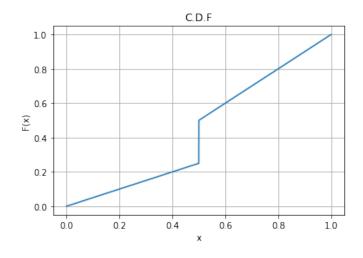

$$P((0,x]) = \begin{cases} \frac{x}{2} & 0 \le x < \frac{1}{2} \\ x & \frac{1}{2} \le x \le 1 \end{cases}$$
 (0.0.1)

Then  $Pr\left(\left\{\frac{1}{2}\right\}\right)$  is equal to.....

### SOLUTION

Let X be a random variable and the CDF  $F_X(x)$  be defined as

$$F_X(x) = \begin{cases} \frac{x}{2} & 0 \le x < \frac{1}{2} \\ x & \frac{1}{2} \le x \le 1 \end{cases}$$
 (0.0.2)

The probability of getting a number in  $\left[0, \frac{1}{2}\right)$ , i.e,  $x = \frac{1}{2}^{-}$  is

$$F_X\left(\frac{1}{2}^-\right) = \frac{\frac{1}{2}}{2} \tag{0.0.3}$$

$$F_X\left(\frac{1}{2}^{-}\right) = \frac{1}{4} \tag{0.0.4}$$

The probability of getting a number in  $\left[0, \frac{1}{2}\right]$ , i.e,  $x = \frac{1}{2}$  is

$$F_X\left(\frac{1}{2}\right) = \frac{1}{2} \tag{0.0.5}$$

Therefore, the probability of getting  $\left\{\frac{1}{2}\right\}$  is

$$\Pr\left(\left\{\frac{1}{2}\right\}\right) = F_X\left(\frac{1}{2}\right) - F_X\left(\frac{1}{2}\right) \tag{0.0.6}$$

$$\Pr\left(\left\{\frac{1}{2}\right\}\right) = \frac{1}{2} - \frac{1}{4} \tag{0.0.7}$$

$$\Pr\left(\left\{\frac{1}{2}\right\}\right) = \frac{1}{4} \tag{0.0.8}$$
